

Drawbridge™

The managed security solution that provides total network protection, wherever you and your staff choose to work - home, office or on the road.

Introducing **Drawbridge**™

A refreshing alternative to more costly high-end solutions.

Your company data is priceless. It includes all your accounts, transactions, clients and supplier information - in fact all your historic data.

But if someone were to hack into your network today - or a serious virus were to play havoc - would your existing security precautions be able to cope?

MORE THAN JUST A FIREWALL

With today's "always on" Internet connections, an off-the-shelf firewall and anti-virus package simply isn't sufficient.

Drawbridge is a sophisticated solution that integrates firewall, anti-virus and anti-spam software plus Internet filtering, remote access and more into one powerful, inexpensive package.

NO EXTRA WORK FOR YOU

Unlike conventional firewalls, Drawbridge is a managed solution. This means that although it's configured and installed onto your system, it's managed remotely by Servatech's experienced team of engineers.

Once it's installed, you can relax. No more struggling with multiple products and manual updates. Everything is carried out automatically at our end with daily reports enabling you to keep track of security activity.

INVINCIBLE AND IMPREGNABLE

Drawbridge is designed to be totally troublefree. It works quietly away in the background providing you with absolute real-time security, round the clock.

It automatically detects, blocks and fixes intrusions such as attacks, viruses, worms, spyware and malicious codes - even spam.

And because many network intrusions come as a result of personal surfing and emailing, controlled Internet access is also possible through Drawbridge.

ACCESS YOUR NETWORK SECURELY WHEREVER YOU ARE

You and your teams are on the move, so why be restricted to centrally held data? You need secure access to your network wherever you choose to work. Drawbridge makes this simple.

The solution includes a Virtual Private Network (VPN) that allows staff to access and collaborate on information remotely and securely.

The result is that you can network faster and more effectively wherever you are - at home, on the road or at a different site.

EXPERT TECHNICAL SUPPORT

As a remotely-managed solution, Drawbridge requires very little input on your part. However should you need expert help or advice at any time, our technical support team is on hand seven days a week.

We can fix a broad range of problems remotely, saving you the hassle of down time and unnecessary call-out costs.

And in the event that remote problem solving isn't possible, our central location means our expert technical team can get to your premises in no time.

GET UP TO SPEED

Drawbridge isn't just about security, it also provides you with a faster, more reliable Internet connection. So when bandwidth congestion is slowing your competitors down, you'll be right up to speed.

In fact wherever you choose to work, Drawbridge provides you with all the tools you need to do business faster, more effectively and more securely. Without you even having to think about it.

Drawbridge™ - Total Security

Your data is your most important asset.

Drawbridge ensures it stays out of harm's way.

Drawbridge provides unprecedented levels of protection against today's increasingly sophisticated online threats.

Because it's tailored to your specific needs and is managed remotely by Servatech, it intercepts and diverts attacks and intrusions - long before they reach your network.

FIREWALL

Drawbridge includes a leading edge firewall - a secure gateway between your organisation and the risks of today's "always on" Internet connections.

It instantly detects and responds to attacks with real-time reporting that enables our experts to ensure your data continues to stay secure.

With Drawbridge, you don't need to worry about unprotected holes or breaches either - it simply doesn't permit these to happen.

This means you can concentrate on your core business without the worry of whether you're up to date with the latest patches and other security upgrades.

ANTI-VIRUS

Over 90% of viruses are spread by email. Undetected they can spread rapidly through your network and play havoc with your systems.

Drawbridge incorporates an advanced and powerful anti-virus engine: Clam-AV.

Trusted by thousands of companies, this powerful software tracks down new viruses round the clock, constantly updating its database to ensure you remain protected.

The result is that all incoming viruses are intercepted and removed before they penetrate your network. And because you don't want to put other networks at risk by sending out infected information, Clam-AV scans outgoing emails as well.

ANTI-SPAM

Spam has gone from being an irritation to presenting a real danger. It can clog up your system and slow your communications right down.

Spam can also carry viruses and trick staff into revealing confidential information by posing as genuine mail.

Being able to distinguish important email from the spam is becoming increasingly difficult. This is why Drawbridge uses one of the most powerful anti-spam filters around: SpamAssassin.

SpamAssassin checks all inbound email against a series of frequently updated spam lists. It also scans email content so that any suspect emails can be quarantined immediately.

This works alongside an automatic grey-list security control, affectively diverting none-legitimate senders from your network.

The result is that because spam is automatically diverted away from your inbox, you only receive genuine emails - freeing up important network space and eliminating the risk of overlooking important messages amongst the congestion.

DAILY REPORTS

Drawbridge provides you with regular online security reports and other essential information, updated on a daily basis.

These include details of, filtered viruses and spam, staff Internet and email usage as well as the number of software updates that have taken place.

So any time you need to check on your security activities, you simply download the latest report. Yet another reason why the Drawbridge solution saves you time.

Drawbridge™ - Total Communication

Do business securely, wherever you are.

SECURE REMOTE ACCESS

Accessing company data via the Internet speeds up the way you do business and is especially beneficial for remote or home-based employees.

However security worries about sharing confidential information in this way mean that up to now many businesses have been unwilling to embrace the clear business benefits of remote access.

Wherever your authorised users log in - office, home or on the road, wired or wireless - Drawbridge prevents third-party tampering and intrusions.

It protects your network with sophisticated PPTP, IPSec and SSH (Secure SHell) authentication technology - industry standards when it comes to establishing a secure VPN (Virtual Private Network).

And because your VPN is constantly monitored and managed on our servers by our experienced team of engineers, you can be sure that your remote access will remain 100% secure.

CONTROLLED INTERNET ACCESS

Statistics show that up to 25% of the working day is spent on personal Internet access.

It doesn't just affect productivity and cost tens of thousands in terms of wasted time, it can also have serious implications on your security.

It's because many Network intrusions come as a result of personal surfing and email that Drawbridge includes controlled Internet access as an option.

Drawbridge ensures that staff don't compromise your security by downloading inappropriate material or opening up your Network to the dangers of hackers, spyware, malicious codes, etc.

It gives you complete control over which PCs are allowed Internet access or email and which are blocked. It also provides you with complete real-time reporting on all staff Internet and email usage so you can take appropriate action immediately.

INTERNET CACHING

Broadband was meant to be fast and with Drawbridge, it is. The solution uses the latest caching technology to speed up your Internet access and provide you with optimum performance, round the clock.

By storing recently visited sites, Drawbridge improves network performance and reduces the problems associated with bandwidth congestion. It also provides you with a far more reliable connection - essential to maintaining your competitive edge.

So while the sheer volume of people accessing the Internet at busy times is slowing your competitors down, you'll be right up to speed.

SECURE EMAIL RELAYING

Drawbridge also incorporates integrated email relay software. This effectively allows your organisation to have multiple email domains coming into your network.

So on the odd occasions when your existing email server may be down, Drawbridge stores all incoming and outgoing emails until you're back on line.

The result is that your contacts never get emails returned undelivered - and you never lose a sale.
